DC7 Shopfronts and advertisements

New and replacement shopfronts in the Market Street conservation area keep the traditional elements of pilasters, fascia, stall riser and cornice, and use timber or painted metal frames. Internally illuminated box fascias are not acceptable; lettering is applied or hand-painted and may be lit by discreet trough lights. Roller shutters are fitted internally and are of an open lattice design; solid external shutters are refused unless the premises is a pharmacy open after 22:00. Fascia depth does not exceed 0.6 m or one fifth of the shopfront height, whichever is less. Projecting signs are limited to one per frontage and sit at fascia level. Cycle parking for staff and customers is provided in line with Table C1 of the Borough Transport SPD, or by a contribution where the pavement is under 2.5 m wide.
